

Pharmacy Update: Excluded Drug List Change Effective February 15, 2017

As of February 15, 2017, some Erectile Dysfunction drugs will be excluded from our Drug List. **This means we will no longer cover them.**

Excluded Drugs	Formulary Alternative
Edex, Levitra, Staxyn, Stendra, Viagra	Cialis

The exclusion of Erectile Dysfunction drugs went into effect on January 15, 2017. Due to some unforeseen delays the member impact lists and member letters on this change are slated to go out by the end of this week. Because of this, all members impacted will be grandfathered until February 15, 2017.

Our pharmacy committee made the decision to exclude these drugs because other safe, effective, less costly alternatives are available. The pharmacy committee is composed of independent doctors and pharmacists who continually review and compare prescription drugs to ensure the drugs we cover include proven medications to treat the majority of medical conditions.

For more information, please contact your PAI representative.
