Lowest Net Cost Formulary

Non-Formulary and Excluded Drugs

Effective April 1, 2023

Why Doesn't My Health Plan Cover Some Drugs?

Your health plan's drug coverage is based on a list of drugs called a **formulary**. The formulary is designed to ensure we cover proven medications for treating the majority of medical conditions. Some drugs are not included on the formulary because other safe, effective, less costly alternatives are available.

Newly launched products and new variations of products already on the market are **not** automatically added to your health plan's formulary. These products are reviewed by a committee of independent doctors and pharmacists who meet regularly to review and compare prescription drugs and decide whether they are clinically appropriate and cost effective. If the committee decides that a drug is appropriate for coverage, it is added to the formulary.

What Should I Do if My Drug Isn't Covered?

Talk to your doctor to see if a covered alternative drug is a good option for treating your condition. Note that **many non-formulary brand-name drugs have covered generic alternatives**.

Of course, you and your doctor make the final decision about the medications that are right for you. If your doctor believes no alternative drug will work for your medical condition, you or your doctor can request a **formulary exception** to have a non-formulary drug covered. Just follow these steps:

Providers

To request a formulary exception, call the precertification number on the member's ID card.

Members

To request a formulary exception, call the Customer Service number on your ID card.

If an exception is approved, drug management programs may apply.

Note: Formulary exceptions can only be considered with required documentation from the member's health care provider.

Additionally, some drugs are fully **excluded** from coverage and are **not** eligible for formulary exception review.

What Happens if I Have a Prescription Filled for a Non-Formluary or Excluded Drug?

You will be able to get your drug, but you will pay the full cost of it. The amount you pay will not count toward any deductible or out-of-pocket maximum you may have.

Which Drugs Aren't Covered?

The drugs on the following pages are either **not** part of your health plan's formulary or are excluded from coverage. There are additional products not specifically listed in this document that are also not covered, including:

- Most **over-the-counter (OTC)** medications, which are not covered under your health plan's prescription drug benefits.
- Some **generic drugs, which are excluded from coverage only when produced by certain manufacturers** but are available from alternate sources. Consult your pharmacist for more information.
- **Certain categories of drugs**, which your health plan's pharmacy benefit may not cover, **such as those used to treat weight loss or sexual dysfunction**. Please check your plan materials for details about coverage for a specific drug category.

Check your benefit information to verify coverage or view your personal benefit information on our website. This list may contain trademarks or registered trademarks of pharmaceutical manufacturers that are not affiliated with your health plan. This list may change or expand from time to time without prior notice.

Please talk to your doctor about covered options that are clinically appropriate for your condition. Excluded products are noted with an asterisk (*). Excluded products are ~~**NOT**~~ eligible for formulary exception review. Specialty drugs are noted with a hashtag (#).
